## What have we done?

We've recognized that the two recipes are essentially the same, although some of the steps require different Coffee Tea implementations. So we've generalized the Boil some water recipe and placed it Boil some water in the base class. Steep the tea bag in the water 3 Brew the coffee grinds 3 Pour coffee in a cup Pour tea in a cup 4 Add sugar and milk 4 Add lemon Caffeine Beverage generalize Boil some water generalize Brew B Pour beverage in a cup relies on relies on subclass subclass for some Add condiments for some Coffee subclass Tea subclass steps steps Steep the tea bag in the water Brew the coffee grinds Caffeine Beverage 4 Add lemon knows and controls the steps of the recipe, and Add sugar and milk performs steps | and 3 itself, but relies on Tea or Coffee to do steps 2 and 4.
